# Bridging the Health Information Gap

**This presentation outlines an innovative approach addressing healthcare challenges through AI technology in rural African communities.**

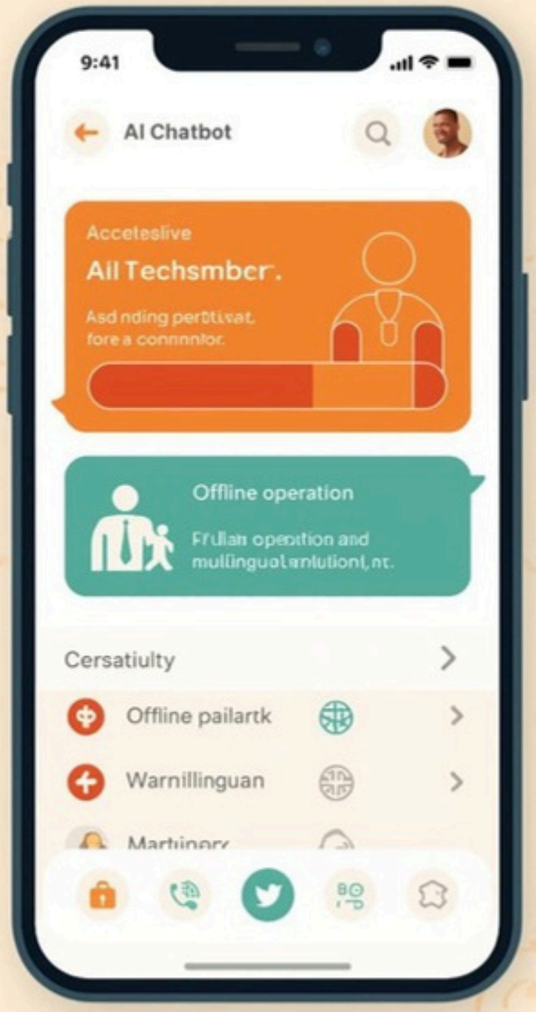
Africare

NOVEMBER 2025

- Lack of reliable health information.

- Severe shortage: 1 doctor for every 5000+ people in many rural communities.

Source: DHS



# THE SOLUTION

Africare

Africare

**AI-Powered community health chatbot**

# WHY DOES IT MATTER

- Language barriers prevent people from understanding medical advice.
- Offline access ensures help is available even without internet.
- It reduces misinformation, self-medication, and preventable illnesses.
- Empowers individuals to make safer, informed health decisions.

# TARGET AUDIENCE

- People in rural or underserved communities with limited access to clinics

- Individuals with low literacy, thanks to local-language support.

# HOW IT WORKS

## A Simple 3-Step User Process

Ask Question → **Users initiate the interaction by asking their health-related question in their preferred language.**

Verify → **Our AI analyzes the query against a database of verified medical protocols and facts.**

Instant Answer → **Users receive an immediate response, providing them with essential health insights whenever needed.**

# LIVE DEMO

# SOCIAL IMPACT

# FUTURE VISION

**01**

**SMS integration for basic phones**

**02**

**Voice-to-text and text-to-voice for full accessibility**

**03**

**Offline Mode will be activated.**
